FIRMWARE DOWN LOADING SYSTEM

NEC CORP

Inventor(s): ;MORI ATSUSHI

Application No. 11240356 , Filed 19990826 , Published 20010316

Abstract:

PROBLEM TO BE SOLVED: To effectively use resources and to improve the performance by using only a firmware needed for the current processing of installation equipment by selecting the module of firmware which needs to be transmitted to perform processing and down-loading it from a library of firmware to an installation equipment.

SOLUTION: An application 2 sets properties of printing at the time of the printing. A print property management part 6 of a printer driver 3 confirms the settings and teaches a host down-loader 9 the property information. Information on a module currently operating on the printer 4 is requested of the printer 4. A printer down-loader 16 generates module information and sends it to a host PC1. The host down-loader 9 once receiving the module information from the printer 4 compares its list with a host-side down-load list to update down-loading.
